

Ages 6-12

One idea, different possibilities.

One starting idea can lead to many outcomes. Students work together on an illustrated story and learn to compare, question and improve what AI suggests.

What we work toward

- Give clear creative instructions and refine them.
- Notice assumptions and stereotypes in generated results.
- Explain the ideas and decisions contributed by the group.

Inside the session

01 Start with your idea

Choose a fictional story challenge and decide what the team wants to communicate before using AI.

02 Explore alternatives

Compare possible images or story directions in a guided demonstration. Change the instructions and discuss what improves.

03 Share your version

Combine selected ideas into a story concept. Present the choices the group made and acknowledge where AI helped.

The practical details

60 minutes, including Q&A.

Classroom: up to 25 students. Assembly capacity agreed separately.

English or Spanish. Online or in person.

USA and Latin America; travel agreed separately.

School supervision and a shared screen. Individual devices are optional.

Thoughtful from the start

Use fictional examples and supervised demonstrations. Activities can run without individual AI accounts; any device use is agreed with the school.

What the group takes away

A group story concept and practice comparing alternatives instead of accepting the first result.

Shaped around your group

Ages 6-8 focus on visual comparison and oral explanations; ages 9-12 can refine instructions and discuss representation in more depth.
